

NESS Safe-flange

Flange with a perfect fit

Used to secure pipes which contain hot, inflammable, corrosive or toxic fluids, especially if these pipes are operated under pressure. If a leak appears at a flange, these fluids can spray and endanger the plant or harm employees.

A safe-flange around the flange offers effective protection against splashing fluids and reduces the negative consequences of a leakage.

Your advantages at a glance

- Operational safety
- Reduction of risks
- Easy installation without tools
- For most DIN and ANSI flange sizes
